

Things to Consider

1. A student will still be required to meet all HHS graduation requirements regardless of their participation in CCP courses.
2. A student must provide their own transportation to the college if he or she is taking courses on the college campus.
3. **The student should be ready for college-level work.** CCP courses are college courses in every sense of the word. Students must be sure they are both academically capable and emotionally mature enough to complete the coursework. While AP courses offer the support of a high school teacher and setting, the coursework is at a collegiate level and very rigorous.
4. Courses taken on a college campus will be comprised of students of all ages enrolled at the college. Your child may be in a study/project group with other students of any age.
5. If your student is in a CCP course, he or she needs to be prepared to do all communication with the professor. The professor will not contact you if there are concerns about your students. If your student is struggling it is their responsibility to seek out the extra help needed, not the role of the parent to contact the professor. There is no requirement for college professors to post grades or assignments online.
6. Students who participate in extracurricular activities must still meet eligibility requirements set by the school district and the OHSAA. Speak to the athletic director to determine eligibility requirements.
7. Credits are guaranteed to transfer from one Ohio public university to another Ohio public university. This does not mean they will count for exactly the same course. There is no guarantee of credit transfer to a private or out-of-state school.
8. If your student participates in CCP and fails a course, the cost of the course falls back on the family.
9. If your child participates in CCP, the courses they earn will impact their high school GPA and college GPA.
10. If in doubt, we recommend contacting the admissions department of the college/program your child is interested in attending. Let them know what your student's options are and see what they recommend.
11. Feel free to reach out to your HHS counselor as well. I am happy to talk this through with you.
